Outline of NGK Insulators, Ltd.

- Established Year: 1919 in Nagoya, Japan (As the first Japanese manufacturer of ceramic insulators.)
- Paid-in Capital: US$ 0.6 Bil (69.8 billion Yen)
- Number of Employees: 18,737 (consolidated)
- Consolidated Subsidiaries: 58 companies
- Annual Net Sales: US$ 4.2 Bil (451 billion Yen) (as of March 2018, Consolidated)

NGK’s diversified products are based on ceramic material & manufacturing technologies.

- **Power Business**: Insulators for power transmission
- **Ceramic Business**: Honeycomb ceramics for automobile, Diesel Particulate Filters
- **Electronics Business**: SAW filters, Electronic components
- **Process Technology Business**: Semiconductor Manufacturing Equipment, drying systems

Structure of NAS Battery Cell

- Abundant material, Sodium and Sulfur, are used for active material of NAS Battery.
- Beta Alumina Ceramic Tube is the key part of NAS Battery.
Structure of NAS Battery System

- **Containerized system** minimize the transportation and installation cost.
- NAS battery **can be used at high temperature area** because inside of Battery Module is high temperature.
- NAS Battery **can be recycled** after the end of battery life.

![Diagram of NAS Battery System]
Features of NAS Battery Energy Storage

- **Long Duration**
  - Can store energy up to 6 hours

- **Compact Layout**
  - 3 times energy density compared to lead acid battery

- **Fast Response**
  - Prompt response – full power charge to discharge in 2 milliseconds

- **High level of reliability**
  - Uses ceramic for electrolyte. No self discharge, superior long term durability

- **High level of safety**
  - Multiple safety features and quality control incorporated to ensure safety

- **Easy to install and relocating**
  - “Plug & Play” Containerized NAS Battery is available

- **Easy Maintenance**
  - Minimal planned maintenance required. Remote operation
NAS Battery Installations Around the World

- Commercialized in Year 2002
- Total Installation Record of 530MW (3700MWh)
  - Domestic 360MW, Overseas 170MW
- Annual Production Capacity 150MW(1000MWh)

Load Leveling, Renewable (wind, Solar), Ancillary & Renewable, Micro Grid
Various applications of NAS Battery System

- NAS Batteries are used at renewable generation site, transmission line, substation and behind the meter (consumer).
- NAS Battery is useful for energy time shifting, stabilizing renewable energy, adjusting demand & supply and backup power supply in small distribution network at off-grid.
Wind Power Stabilization and Energy Time Shift

- NAS Battery absorb the fluctuation of output power from wind generator and time-shift the energy.

Rokkasho Futamata Wind Farm in Japan

- Wind turbine: 51 MW
- NAS battery: 34 MW (224 MWh)

NAS Battery absorb the fluctuation of output power from wind generator and time-shift the energy.
Solar Power Stabilization and Energy Time Shift

- NAS Battery absorb the fluctuation of output power from PV and time-shift the energy.

PV: 5MW

NAS Battery: 1.5MW

Example of Operation pattern

Wakkanai

Financed by NEDO
(New Energy and Industrial Technology Development Organization)
Frequency Control and Energy Time Shift

- NAS Battery stabilizes grid frequency in remote island.
- NAS Battery also shifts energy and absorbs surplus PV output during daytime.

High Efficiency Operation of Diesel Generator

- NAS Battery can enhance the efficiency of diesel generators and reduce the air pollutants and greenhouse gases by the following schemes.
  a) increase renewable generators with adjusting demand and supply by NAS battery
  b) run the diesel generator at the highly efficient power range with absorbing the fluctuation of demand by NAS Battery

- NAS Battery in Catalina Island is used to minimize the environmental impact by the above scheme b).

**Allowable power range**
- Generator #1
- Generator #2

Owner: Southern California Edison
System Size: 1 MW
Commissioning Operation Date: August, 2011
Utilizing NAS battery with renewable power source (PV, Wind turbine, etc.), renewable power will be available for 24 hours/day.

Renewable power supply system

Time shift and adjust supply to demand

Generate renewable power

Supply stable power as required

NAS Battery

PV and/or Wind Turbine

Load
Simulation of power supply system at off-grid, assumed system

- Following three cases of power supply systems at off-grid is simulated.
- All the Cases are intended to supply about 0.4 MW constantly.

Simulation of power supply system at off-grid, operation

- Constant 0.4MW power supply for 24 hours could be achieved by 2 MWp PV and 1.2MW NAS Battery.

Effective power of 2MWp PV: 1.7MW-ac
Capacity of NAS Battery: 1.2W-ac / 7.2MWh-ac
Simulation of power supply system at off-grid, total cost

- For the three Cases, the total costs to supply electricity about 0.4MW constantly for 25 years are calculated.
- The total cost of Case 3 (DG+PV+NAS Battery) will be the lowest according to the calculation.

Notes:
The above data are rough estimation. To enhance the accuracy of the data, detailed feasibility study should be implemented.
CO2 emission can be reduced about 90% changing the power supply system from Case 1 (DG) to Case 3 (DG+PV+NAS Battery) according to the calculation.
Example of NAS Battery System Layout (1.2MW)

PCS (600kW)

NAS Battery Container (200kW)

(13m) (10m) (29m) (39m)
Example of NAS Battery System (1.2MW) + PV (2MWP) Layout

- **PV Panel Area**: about 40,000 m²
- **NAS Battery Area**: about 500 m²
Summary

1. NAS Battery is reliable and effective battery to store large amounts of electric energy by using well-established ceramic technology.

2. NAS Battery is systematically integrated in ocean container. It is easy to install, operate and maintenance.

3. The capability and durability of NAS Battery are proven by abundant field experiences.

4. By integrating NAS Battery and renewable energy power sources, stable, clean and low cost power can be supplied for the distribution network at off-grid.
